

Could your ankle, knee, hip or back PAIN be coming from your feet?

Many people know that flat feet are often the cause of foot pain, but did you know that your foot structure may also be contributing to other ailments such as shin, knee, hip or back pain?

Foot pain is only **ONE SYMPTOM** of abnormal foot function and

WE CAN HELP!

All it takes is a 10-15 minute examination.

During this exam we will assess your foot for calluses, your standing posture, your footwear, and perform a digital gait analysis.

This will allow us to determine your foot type, how it may be contributing to your symptoms, and how foot orthoses may be right for you.

The **QUADRATEST** orthotic system consists of 6 pre-fabricated foot orthoses that are specifically tailored to each of the 6 major foot types.

The most common conditions treated by foot orthoses:

- Plantar Fasciitis (heel or arch pain)
- Metatarsalgia (pain in ball of the foot)
- Knee Pain
- Lower Back Pain
- Tendinitis
- Shin Splints
- Hip Bursitis
- Foot and Ankle Pain
